RE: New CRISP Registry Feature — Reorder Cases on the Weekly Dashboard

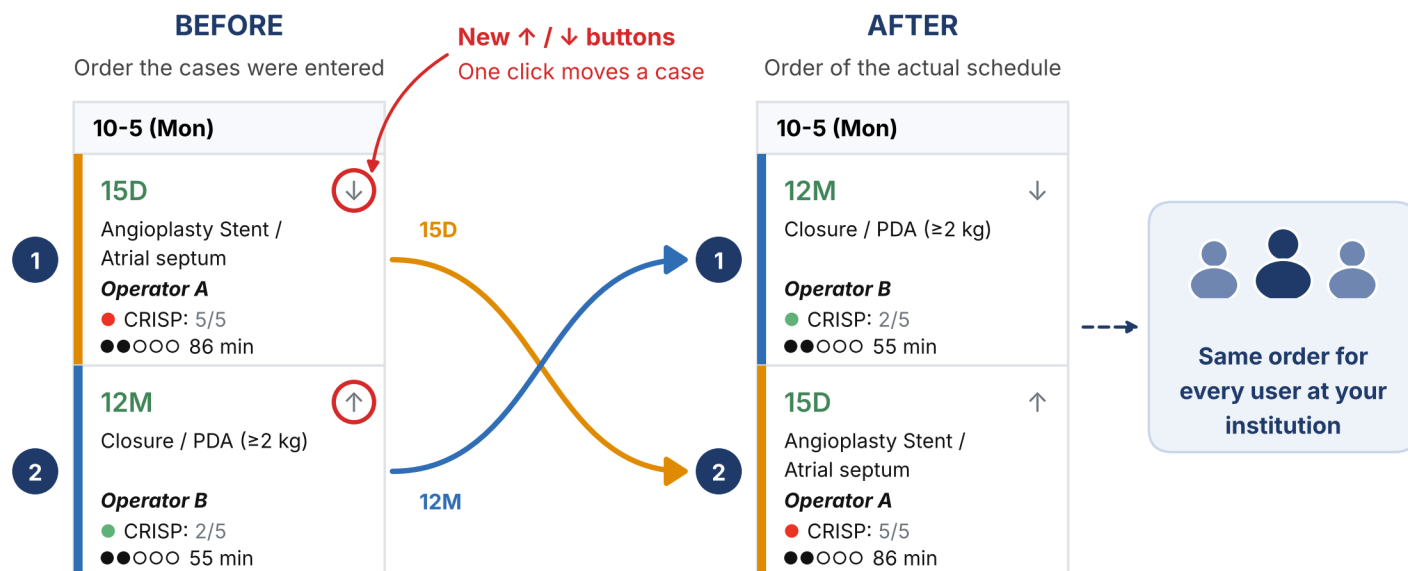

Dear CRISP Registry Users,

We are pleased to introduce a new feature in the CRISP Registry data entry interface: you can now change the order of cases within a day on the Weekly Dashboard.

The Weekly Dashboard is a core part of the registry. It shows your week's schedule at a glance — each case with its operator, risk category, patient age, and procedure type. Until now, however, cases were listed in the order they were created, not the order in which they are performed.

Key points

- **What's new:** Each case now has an up (↑) or down (↓) arrow in its upper-right corner. Click the arrow to move the case up or down within the same day.
- **Why it helps:** Cases are often entered out of sequence, and the day's order often changes for cath lab needs, patient and family circumstances, or overall management. The dashboard can now match the actual schedule.
- **Shared within your institution:** When one user changes the order, the new order appears on the Weekly Dashboard of every user at your institution, so everyone sees the same schedule.

Example: on Monday, October 5, one click moves the 15D case below the 12M case.

We hope this feature makes the Weekly Dashboard easier to use in your daily work. Thank you for your continued participation in the CRISP Registry.
